

Verbit's Key Partnership with Kaltura

Verbit has served as the in-house vendor for Kaltura's new REACH Captioning solution since the beginning of 2019.

For migrated and new REACH customers, Verbit provides:

- A **technology-driven partner**, creating a host of solutions for Kaltura customers, including dynamic modeling with unique dictionaries for customers, enabling enterprises to select between data processing regions (for HIPAA and GDPR compliance) and other unique technology tools
- The ability to **meet SLA requirements** at scale, with unmatched on-time performance regardless of file length. Whether a file is 20 minutes or 3 hours long, it is accurately captioned on time
- **True 99%+ accuracy** that surpasses the competition, which is mainly comprised of transcriber marketplaces that, when tested, do not provide nearly the same level of accuracy
- **Unmatched machine-only caption accuracy**, providing customers with significantly improved accuracy when compared to that delivered by competitive ASR engines
- **Unparalleled security**, as the only SOC 2 Type 2 and HIPAA compliant transcription technology company
